

KONDOR®

Touchless Automatic Product Suite - For Every Bay & Budget

KL1

High-Flying Performance. Down-To-Earth Pricing.

Starting at \$56,150

The new Belanger Kondor® KL1 (One-Arm Touchless Automatic) delivers a one-arm wash style familiar to many drivers, updated with the smoothest one-arm operation ever, and the sleek design of the Kondor® platform. Perfect for new and existing bays, innovations include a less intrusive, compact carriage head, and narrow overhead travel rails – with installation options for almost every bay size.

What's more, every Kondor® is built to impress. The narrow overhead rails form an 'inverted runway' that helps drivers get in position. The compact carriage head helps users feel safer, and eases diagnostic and service procedures from just two ladder positions. The Auto-Resetting Breakaway Arm resets itself without intervention. A stainless steel carriage frame is available based on your preference.

The Kondor® is designed to clean, and built to keep cleaning. That's why every Kondor® includes essential solution delivery injectors – including two presoaks and a wax application. Other application options include Triple Foam, Spot-Free Rinse, additional waxes, and bug spray. The galvanized travel rails and proven 25HP motor with CAT 35/35 Pump help ensure an extended service life and ROI.

Increase appeal with branding options and functional lighting. Available white carriage housings and colored branding panels with custom logos are ideal for site branding. Optional Active Site Marketing™ wing covers and wash arm cycle through 6 backlit colors to attract customers off the street and onto your site. And the available LED Navigation System™ illuminates the wash arm with RGB color changing lights to help drivers quickly position their vehicles.
